Specifications

The award winning Elac BS 243 offers a musical imprint as true to life as possible, with a three-dimensional sound radiation pattern that acoustically 'energises' your room in a consistent and harmonised way. They are designed to work either in small or medium-sized living areas as a Hi-Fi stereo speaker or alternatively in large spaces as rear speakers in a surround-sound setup. The BS 243 offer a holographically convincing soundstage from what is a surprisingly small cabinet design. The reviews shown below describe them much better than we ever could. Available in Cherry Veneer (pictured) Gloss Black, Gloss White, Mocha Veneer or Titan Shadow (a titanium/shiny grey finish). Set-up Options When the BS 243 is connected to a digital surround receiver the speaker option in the receiver's menu should be set to 'LARGE'. However, when very high

volume is required it is better to set the option to 'SMALL' and set the corresponding crossover frequency to a maximum of 50-60 Hz. Reviews 'BEST STAND MOUNT SPEAKERS 2010 AWARD' (Hi-Fi World magazine) 'FIVE GLOBES' (Hi-Fi World magazine) 'Smooth and svelte yet punchy and engaging, this is an exceptional pair of mid-price standmounters' (Hi-Fi World magazine) 'There's a profound sense of freedom in the treble arena. Some speakers sound nervous when they tackle any treble task, yet the Elacs displayed both relish and finesse in this department... moreover the midband sounds like someone who's had a really good sleep and is now full of energy and raring to go: yet it's suffused with calm and ease. As for the bass? That if anything, was the surprising package. It was pacy and effective but without strain or boom' (Hi-Fi World magazine) 'So with the BS243s, Elac has a winner on their hands - they deserve investigating and should be top of your demo list' (Hi-Fi World magazine) Specifications- Principle: 2-ways, bass reflex- Woofer: 1 ♦ 150 mm AS-XR cone, 1 ♦ 45 mm (with Plug)- Tweeter: 1 ♦ JET III, (mag. shielded)- Amp Power Recommended: 30-150 W / channel- Crossover Frequency: 2,700 Hz- Sensitivity: 87 dB / 2.83 V / 1 m- Minimum Impedance: 3.6 Ω at 240 Hz- Frequency Range: 41 - 50,000 Hz- Nominal / Peak Power Handling: 60 / 80 W- Dimensions H ♦ W ♦ D: 285 ♦ 170 ♦ 232 mm- Weight: 5.2 kg We are authorised ELAC retailers.
